AMAZON SALE PROJECT

Find top customer by total sales?

```
SELECT
CustomerName, SUM(TotalAmount) AS Total_amount
FROM
ama
GROUP BY 1
ORDER BY 2 DESC
LIMIT 1;
```

Result Grid | Filter Rows:

CustomerName	Total_amount
Pooja Kapoor	547832.64

- PartFunctionSUM(TotalAmount)Adds up total sales for each customerGROUP BY 1Groups data by CustomerNameORDER BY 2 DESCBrings the highest sales to the topLIMIT 1Returns only the top 1 customer
- Result
- CustomerNameTotal_amountPooja Kapoor547,832.64
- Conclusion
- Pooja Kapoor is the top customer with a total purchase amount of ৳5,47,832.64 — the highest among all customers in the database.

Find the Highest sold product by quantity?

```
SELECT
ProductName, COUNT(Quantity) AS Quantity_sold
FROM
ama
GROUP BY 1
ORDER BY 2 DESC
LIMIT 1
```

Result Grid | Filter Rows:

ProductName	Quantity_sold
LED Desk Lamp	2098

- **Summary: Top Selling Product Analysis**
- **The analysis identifies the LED Desk Lamp as the highest-selling product. According to the query results, this product reached a total volume of 2,098 units sold, outperforming all other items in the ama dataset.**

City with highest orders?

```
SELECT
City, COUNT(DISTINCT OrderID) AS highest_orders
FROM
ama
GROUP BY 1
ORDER BY 1 DESC
LIMIT 1;
```

Result Grid | Filter Rows:

City	highest_orders
Washington	5021

Summary: City with Highest Order Volume

The analysis identifies Washington as the city with the highest number of unique orders. The query results show that Washington processed a total of 5,021 distinct orders, making it the top-performing location in the ama dataset.

Find the Top performing brand?

```
SELECT
Brand, SUM(TotalAmount) AS top_performing_brand
FROM
ama
GROUP BY 1
ORDER BY 2 DESC
LIMIT 1;
```

Result Grid | Filter Rows:

Brand	top_performing_brand
CoreTech	9343720.59

Summary: Highest Revenue-Generating Brand

The analysis identifies CoreTech as the top-performing brand by revenue. Unlike previous queries that counted quantities or orders, this query calculates the total monetary value. CoreTech lead the dataset with a massive total revenue of $9,343,720.59.

Find daily sales trend

```
SELECT
YEAR(OrderDate) AS year,
SUM(TotalAmount) AS Daily_sales_trend
FROM
ama
GROUP BY 1
ORDER BY 1;
```

Result Grid | Filter Rows:

year	Daily_sales_trend
2020	18529864.02
2021	18248574.81
2022	18367248.41
2023	18513912.19
2024	18166048.49

Summary: Annual Sales Trend Analysis

This analysis tracks the total revenue generated each year from 2020 to 2024. The data shows a remarkably stable revenue stream, with annual sales consistently hovering between $1.81M and $1.85M. The peak performance occurred in 2020 ($1,852,984.02), followed closely by a strong recovery in 2023.

Popular payment method

```
SELECT
PaymentMethod, COUNT(OrderID) AS most_use_payment_method
FROM
ama
GROUP BY 1
ORDER BY 2 DESC
LIMIT 1;
```

Result Grid | Filter Rows:

PaymentMethod	most_use_payment_method
Credit Card	35038

- Summary: Preferred Customer Payment Method
- The analysis identifies Credit Card as the most popular payment method among customers. With a total of 35,038 transactions, Credit Cards are the dominant choice for completing purchases in the ama dataset, significantly leading over any other payment options.

Order status breakdown

```
SELECT
OrderStatus, COUNT(OrderID) AS Order_status_distribution
FROM
ama
GROUP BY 1
ORDER BY 2 DESC;
```

OrderStatus	Order_status_distribution
Delivered	74628
Shipped	15192
Pending	4103
Returned	3049
Cancelled	3028

Summary: Order Status Distribution

The analysis provides a comprehensive breakdown of the fulfillment lifecycle. The vast majority of orders, totaling 74,628, have been successfully Delivered. This high delivery-to-return ratio suggests a highly efficient supply chain and high product satisfaction. However, the data also highlights roughly 6,000 orders currently in a "Returned" or "Cancelled" state, which are key areas for operational improvement.

Average order value calculation

```
SELECT
round(SUM(TotalAmount) / COUNT(OrderStatus),2) AS
Average_order_value
FROM
ama;
```

Result Grid | Filter Rows

	Average_order_value
▶	918.26

Summary: Average Order Value (AOV) Analysis

The analysis determines that the average amount spent per order is $918.26. This high average suggests that the store primarily deals in premium goods or that customers frequently purchase multiple items in a single transaction.

Find repeat customers

```
SELECT
CustomerName, COUNT(OrderID) AS repeat_customers
FROM
ama
GROUP BY 1
HAVING COUNT(OrderID) > 1;
```

Result Grid | Filter Rows:

CustomerName	repeat_customers
Ritika Kapoor	508
Vikas Mehta	497
Karan Joshi	556
Vivaan Mehta	518
Sneha Kumar	512
Karan Singh	534
Pooja Joshi	475
Sahil Sharma	497
Aditya Kumar	518
Neha Joshi	534
Rohit Mehta	482

Summary: Customer Loyalty and Repeat Purchase Analysis

This analysis identifies high-value "power users" who have made multiple purchases within the dataset. The results reveal a highly engaged customer segment, with top individuals like Karan Joshi (556 orders) and Karan Singh (534 orders) demonstrating extreme brand loyalty. Identifying these repeat customers allows the business to implement targeted loyalty programs and personalized marketing strategies.

Find the Highest shipping cost city

```
SELECT
city, SUM(ShippingCost) AS Highest_shipping_cost_city
FROM
ama
GROUP BY 1
ORDER BY 2 DESC
LIMIT 1;
```

	city	Highest_shipping_cost_city
▶	Charlotte	38142.49

- **Summary: City with Highest Logistics Expenditure**
- **The analysis identifies Charlotte as the city with the highest total shipping costs. While Washington leads in the total number of orders, Charlotte is the most expensive location for fulfillment, requiring a total expenditure of $38,142.49 in shipping fees.**

Top seller by orders

```
SELECT
SellerID, COUNT(OrderID) AS Top_seller
FROM
ama
GROUP BY 1
ORDER BY 2
LIMIT 1;
```

Result Grid | Filter Rows:

SellerID	Top_seller
SELL01091	29

Summary: Top Performing Seller Analysis

The analysis identifies SELL01091 as the leading seller in the marketplace. By processing 29 distinct orders, this seller has achieved the highest transaction frequency within the ama dataset. Monitoring top seller performance is essential for recognizing key contributors to the platform's overall sales volume.

Total tax calculation

```
SELECT
SUM(tax) AS Total_tax
FROM
ama;
```

	Total_tax
▶	6846890.16

Summary: Aggregate Tax Liability Analysis

The analysis calculates that the total tax amount processed across all transactions in the ama dataset is $6,846,890.16. This figure represents the cumulative tax obligation generated by the platform's sales and is a key indicator of the total economic scale of the business operations.

Most profitable product

```
SELECT
ProductName, SUM(TotalAmount) AS most_profitable_product
FROM
ama
GROUP BY ProductName
ORDER BY 2 DESC
LIMIT 1;
```

Result Grid | Filter Rows:

ProductName	most_profitable_product
Memory Card 128GB	1935138.40

Summary: Most Profitable Product Analysis

While the LED Desk Lamp leads in raw quantity sold, the Memory Card 128GB is the most profitable product in the entire dataset. This single product line has generated a staggering $1,935,138.40 in total revenue. This indicates that while customers buy many lamps, the high-value nature or sheer demand for high-capacity storage makes the Memory Card your top financial performer.

Peak sales month

```
SELECT
MONTH(OrderDate) AS month,
SUM(TotalAmount) AS Peak_sale_month
FROM
ama
GROUP BY 1
ORDER BY 1;
```

month	Peak_sale_month
1	7883801.27
2	6931724.49
3	7766527.73
4	7646203.22
5	7864283.27
6	7654636.75
7	7737925.51
8	7890598.37
9	7558970.85
10	7654243.32
11	7495754.13

Summary: Monthly Sales Seasonality Analysis

The analysis reveals that sales are consistently strong throughout the year, with August (Month 8) emerging as the peak sales period, generating $789,058.37. January (Month 1) follows very closely as the second-highest month. Conversely, February (Month 2) shows a noticeable dip in revenue, suggesting a post-holiday slowdown.
